

Your Facility's Mass Notification Solution

Netbell Network Horn Speaker

When an emergency situation arises, having both visual and audible alarms is critical for quickly notifying people of potential dangers. Our programmable LED Message Display paired with the Netbell industrial PA system provides an effective emergency alert solution that is easy to set up and use.

The bright IP-Based LED display with long viewing distance ensures alert messages are highly visible. Its 25 customizable messages, multiple activation methods, and industrial-grade design enable it to reliably convey visual alerts when needed.

Complementing the visual display, the Netbell industrial PA system broadcasts audible alerts through its high performance speakers. With the ability of storing custom messages up to 10 hours, programmable inputs, and paging capabilities, the simple integration and reliable operation gives you effective emergency communication when it matters most.

Key Features & Benefits

- ◇ Network enabled with built-in web-based software
- ◇ PA system provides tones and voice paging for clear emergency instructions, break time alerts, automated reminders and other audible notifications
- ◇ Large LED display for emergency instructions, a clock, countdown/count up timer or provide other messages during idle periods
- ◇ Manual and automated activation via buttons, sensors, schedules and 3rd party system integration via RESTful API
- ◇ Transmits custom or default messages according to defined priorities
- ◇ Rugged and reliable hardware suitable for industrial facilities
